2.0	PROJECT INFORMATION
∠.U	TRUJECT INFURIMATION

If project is multi-jurisdictional, information must be consolidated in this section.

2.1 PROJECT NAME: Alomar-Hibernia Reconstruction

2.2 BRIEF PROJECT DESCRIPTION - (Sections A through C):

A: SPECIFIC LOCATION:

Alomar and Hibernia Drives are contiguous streets located in central Delhi Township. Alomar runs southeasterly from Foley Road for 3295.9 feet to Morrvue Drive. Hibernia runs westerly from Alomar Drive for 985.6 feet to Cannas Drive

PROJECT ZIP CODE: 45238

B: PROJECT COMPONENTS:

Project consists of full depth removal of roadway and curbs, undercutting existing subgrade to obtain proper depth for replacement on a 10" stone base, 5" of asphalt pavement, rolled concrete curb and gutter (30") and underdrains at all low points; sidewalk and driveway repair or replacement; and associated utility work.

C: PHYSICAL DIMENSIONS:

Current roadways are 25' in width. Sidewalks are located within the right of way. Alomar was overlaid in 1986; Hibernia was overlaid in 1978. Overlays are old and brittle and serve to mask joint blow-ups and roadway faulting. Water ponds on Alomar roadway due to uneven and broken slabs and bond loss occurs on both streets where overlay has been lost from the surface of the street. Right-of-way widths are 50 feet. Sidewalks are badly deteriorated and uneven. Surface level and subgrade water intrusion cause subgrade failures throughout. See additional support information for pavement management system roadway deficiencies and photos for proof of deficiencies.

D: DESIGN SERVICE CAPACITY:

Detail current service capacity versus proposed service level.

Current service capacity design is adequate for existing use. Highest ADT = 2596 vehicles per day x 1.2 or 3115. Total users = 3115.

Road or Bridge: Current ADT 2596 Year: 1998 Projected AD	Г:Year:
Water/Wastewater: Based on monthly usage of 7,756 gallons per household, ordinance. Current Residential Rate: S Proposed Rate: S	attach current rate
Stormwater: Number of households served:	
USEFUL LIFE / COST ESTIMATE Project Useful Life	20 Voors

2.3 USEFUL LIFE / COST ESTIMATE: Project Useful Life: 20 Years.

Attach Registered Professional Engineer's statement, with <u>original seal and signature</u> confirming the project's useful life indicated above and estimated cost.

3.0 REPAIR/REPLACEMENT or NEW/EXPANSION:

TOTAL PORTION OF PROJECT REPAIR/REPLACEMENT	\$ 1,125,0	00.00
TOTAL PORTION OF PROJECT NEW/EXPANSION	\$	0.00

Changes in Project Officials must be submitted in writing from the CEO.

^{*} Failure to meet project schedule may result in termination of agreement for approved projects. Modification of dates must be requested in writing by the CEO of record and approved by the commission once the Project Agreement has been executed. The project schedule should be planned around receiving a Project Agreement on or about July 1st.

6.0 ATTACHMENTS/COMPLETENESS REVIEW:

Confirm in the blocks [| below that each item listed is attached.

- X A certified copy of the legislation by the governing body of the applicant authorizing a designated official to sign and submit this application and execute contracts. This individual should sign under 7.0, Applicant Certification, below.
- [X] A certification signed by the applicant's chief financial officer stating all local share funds required for the project will be available on or before the dates listed in the Project Schedule section. If the application involves a request for loan (RLP or SCIP), a certification signed by the CFO which identifies a specific revenue source for repaying the loan also must be attached. Both certifications can be accomplished in the same letter.
- [] A cooperation agreement (if the project involves more than one
- [X] A registered professional engineer's detailed cost estimate and useful life statement, as required in 164-1-13, 164-1-14, and 164-1-16 of the Ohio Administrative Code. Estimates shall contain an engineer's original seal or stamp and signature. subdivision or district) which identifies the fiscal and administrative responsibilities of each participant.
- Projects which include new and expansion components and potentially affect productive farmland should include a statement evaluating the potential impact. If there is a potential impact, the Governor's Executive Order 98-VII and the OPWC Farmland Preservation Review Advisory apply.
- [X] Capital Improvements Report: (Required by O.R.C. Chapter 164.06 on standard form)
- [X] Supporting Documentation: Materials such as additional project description, photographs, economic impact (temporary and/or full time jobs likely to be created as a result of the project), accident reports, impact on school zones, and other information to assist your district committee in ranking your project. Be sure to include supplements which may be required by your local District Public Works Integrating Committee.

7.0 APPLICANT CERTIFICATION:

The undersigned certifies that: (1) he/she is legally authorized to request and accept financial assistance from the Ohio Public Works Commission; (2) to the best of his/her knowledge and belief, all representations that are part of this application are true and correct; (3) all official documents and commitments of the applicant that are part of this application have been duly authorized by the governing body of the applicant; and, (4) should the requested financial assistance be provided, that in the execution of this project, the applicant will comply with all assurances required by Ohio Law, including those involving Buy Ohio and prevailing wages.

Applicant certifies that physical construction on the project as defined in the application has NOT begun, and will not begin until a Project Agreement on this project has been executed with the Ohio Public Works Commission. Action to the contrary will result in termination of the agreement and withdrawal of Ohio Public Works Commission funding of the project.

This is to certify that upon the satisfactory completion of this work, the useful life of the streets on this project will be at least 20 years?

Signed: William W. Buty Law P.E.P.S.

DELHI TOWNSHIP

Road Maintenance

Robert W. Bass, Highway Superintendent

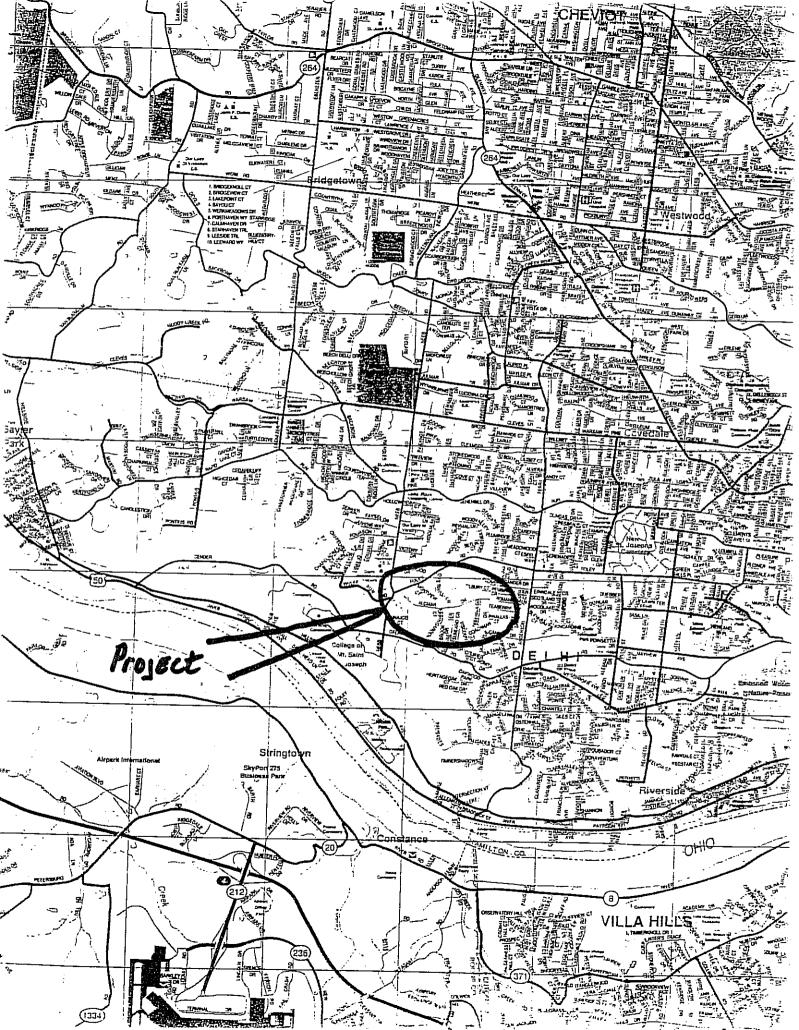

STATUS OF FUNDS

This is to certify that Delhi Townships portion for the funding of this project is available or will become available on January 1, 2002.

Kenneth J. Ryan

Township Clerk & Chief Financial Officer

DELHI TOUNSHIP

Road Maintenance

Robert W. Bass, Highway Superintendent

ENABLING LEGISLATION

Trustee Espelage moved and Trustee Miller seconded to apply to the District 2 Integrating Committee for the below mentioned projects and to appoint Nicholas J. La Scalea as Chief Executive Officer, Kenneth J. Ryan as Chief Financial Officer and Robert W. Bass as Project Manager.

Projects being requested for Issue 2 Infrastructure Bond Funding for Program Year 2000

1.) Alomar/Hibernia Reconstruction

\$1,125,000.00

2.) Rentz Lane Reconstruction

\$ 390,000.00

Grand Total

\$ 1,515,000.00

Trustees Espelage, Miller and La Scalea voted ave at roll call. Motion Carried.

Certificate of Clerk

It is hereby certified that the foregoing is a true and correct copy of a motion passed by the Delhi Township Board of Trustees in session on August 29, 2001.

In witness whereof I have hereunto set my hand this 29th day of August, 2001.

kenneth J. Ryan- Township Clerk

DELHI TOWNSHIP

Road Maintenance

Robert W. Bass, Highway Superintendent

September 11, 2002

Joe Cottrill Hamilton County Engineer 10480 Burlington Road Cincinnati, OH 45231

RE: Alomar-Hibernia Reconstruction Loan

Dear Joe:

Per your request please regard this letter as verification that Delhi Township will repay its' partial OPWC Loan for the above mentioned project out of the Road and Bridge Fund (04.1420.0302). If you have any additional questions, please ask.

Sincerely,

Kermeth J. Rya Clerk

KJR/pw

DELHI TOWNSHIP

Road Maintenance

Robert W. Bass, Highway Superintendent

CERTIFICATION OF TRAFFIC VOLUME

This statement is to certify that traffic volumes noted for this project are true and correct to the best of my knowledge.

Nicholas J. LaScalea,

Delhi Township Trustee and Chief Executive Officer

ADDITIONAL SUPPORT INFORMATION

For Program Year 2002 (July 1, 2002 through June 30, 2003), jurisdictions shall provide the following support information to help determine which projects will be funded. Information on this form must be accurate, and where called for, based on sound engineering principles. Documentation to substantiate the individual items, as noted, is required. The applicant should also use the rating system and its' addendum as a guide. The examples listed in this addendum are not a complete list, but only a small sampling of situations that may be relevant to a given project.

1) What is the physical condition of the existing infrastructure that is to be replaced or repaired?

Give a statement of the nature of the deficient conditions of the present facility exclusive of capacity, serviceability, health and/or safety issues. If known, give the approximate age of the infrastructure to be replaced, repaired, or expanded. Use documentation (if possible) to support your statement. Documentation may include (but is not limited to): ODOT BR86 reports, pavement management condition reports, televised underground system reports, age inventory reports, maintenance records, etc., and will only be considered if included in the original application. Examples of deficiencies include: structural condition; substandard design elements such as widths, grades, curves, sight distances, drainage structures, etc.

Pictures tell the story of the roadway problems much better than any visual inspection performed in above freezing weather. The Township has received numberous complaints over the past two years as frost heave swells virtually every transverse joint on these streets. This essentially creates 3 to 5 inch high speed bumps at each joint and wrecks havoc on vehicle suspensions. Delhi Township's Independent Pavement Management System shows high severity deterioration in the category of raveling; moderate severity deterioration in the categories of bond loss, patch deterioration, corugation/slippage, longitudinal, transverse and reflective cracking and shattered/swell slabs; and low severity deterioration in the category of pumping and settlement. The pavements show an immediate maintenance priority and the ride quality is at the worst possible rating. The structural PCI on the four sections show as very poor to failed leaving no alternative but to reconstruct. Overall pavements are failed (FINAL PCI = 49.00, 58.60, 2.90 and 1.00) on the four sections. Drainage structures need to be designed to handle a multitude of subgrade and surface drainage problems that have caused the base to fail and roadway icing. Sidewalks are faulted, cracked and broken which necessitates replacement. The streets were developed in 1955 and 1969.

2) How important is the project to the safety of the Public and the citizens of the District and/or service area?

Give a statement of the projects effect on the safety of the service area. The design of the project is intended to reduce existing accident rate, promote safer conditions, and reduce the danger of risk, liability or injury. (Typical examples may include the effects of the completed project on accident rates, emergency response time, fire protection, and highway capacity.) Please be specific and provide documentation if necessary to substantiate the data. The applicant must demonstrate the type of problems that exist, the frequency and severity of the problems and the method of correction.

Pictures tell the story of the roadway problems much better than any visual inspection performed in above freezing weather. The Township has received numberous complaints over the past two years as frost heave swells virtually every transverse joint on these streets. This essentially creates 3 to 5 inch high speed bumps at each joint and wrecks havoc on vehicle suspensions and makes safe travel at the posted speed limit impossible. Safety will be

improved upon completion of the project with the re-establishment of a new, smooth riding
surface throughout which will eliminate the need to drive left of center to avoid potholes and
faulted pavements. Re-established crown and grade will eliminate on-street ponding and
reduce the risk of hydroplaning and icing. Photos confirm roadway ponding which causes
icing in the winter months. Faulted, cracked and broken sidewalks are a hazard to the
pedestrian public.
3) How important is the project to the health of the Public and the citizens of the District and/or service area?
Give a statement of the projects effect on the health of the service area. The design of the project will improve the overall condition of the facility so as to reduce or eliminate potential for disease, or correct concerns regarding the environmental health of the area. (Typical examples may include the effects of the completed project by improving or adding storm drainage or sanitary facilities, replacing lead jointed water lines, etc.). Please be specific and provide documentation if necessary to substantiate the data. The applicant must demonstrate the type of problems that exist, the frequency and severity of the problems and the method of correction. The project will have no effect on the public health.
4) Does the project help meet the infrastructure repair and replacement needs of the applying jurisdiction?
The jurisdiction must submit a listing in priority order of the projects for which it is applying. Points will be awarded on the basis of most to least importance.
Priority 1 Alomar / Hibernia Reconstruction
Priority 2 Rentz Place Reconstruction
Priority 3 Priority 4
Priority 5
5) Will the completed project generate user fees or assessments?
Will the local jurisdiction assess fees or project costs for the usage of the facility or its products once the project is completed (example: rates for water or sewer, frontage assessments, etc.).
No X Yes If yes, what user fees and/or assessments will be utilized?
6) Economic Growth – How will the completed project enhance economic growth
Give a statement of the projects effect on the economic growth of the service area (be specific). The project will have no effect on economic growth in the area.
7) Matching Funds - LOCAL

The information regarding local matching funds is to be filed by the applicant in Section 1.2 (b) of the Ohio Public Works Association's "Application For Financial Assistance" form.

8) Matching Funds - OTHER

The information regarding local matching funds is to be filed by the applicant in Section 1.2 (c) of the Ohio Public Works Association's "Application For Financial Assistance" form. If MRF funds are being used for matching funds, the MRF application must have been filed by August 10 th of this year for this project with the Hamilton County Engineer's Office. List below all "other" funding the source(s).

ADDENDUM TO THE RATING SYSTEM

General Statement for Rating Criteria

Points awarded for all items will be based on engineering experience, field verification, application information and other information supplied by the applicant, which is deemed to be relevant by the Support Staff. The examples listed in this addendum are not a complete list, but only a small sampling of situations that may be relevant to a given project.

Criterion 1 - Condition

Condition is based on the amount of deterioration that is field verified or documented exclusive of capacity, serviceability, health and/or safety issues. Condition is rated only on the facility being repaired or abandoned. (Documentation may include: ODOT BR86 reports, pavement management condition reports, televised underground system reports, age inventory reports, maintenance records, etc., and will only be considered if included in the original application.)

Definitions:

Failed Condition - requires complete reconstruction where no part of the existing facility is salvageable. (E.g. Roads: complete reconstruction of roadway, curbs and base; Bridges: complete removal and replacement of bridge; Underground: removal and replacement of an underground drainage or water system; Hydrants: completely non functioning and replacement parts are unavailable.)

<u>Critical Condition</u> - requires moderate or partial reconstruction to maintain integrity. (E.g. Roads: reconstruction of roadway/curbs can be saved; Bridges: removal and replacement of bridge with abutment modification; Underground: removal and replacement of part of an underground drainage or water system; Hydrants: some non-functioning, others obsolete and replacement parts are unavailable.)

<u>Very Poor Condition</u> - requires extensive rehabilitation to maintain integrity. (E.g. Roads: extensive full depth, partial depth and curb repair of a roadway with a structural overlay; Bridges: superstructure replacement; Underground: repair of joints and/or minor replacement of pipe sections; Hydrants: non-functioning and replacement parts are available.)

Paor Condition - requires standard rehabilitation to maintain integrity. (E.g. Roads: moderate full depth, partial depth and curb repair to a roadway with no structural overlay needed or structural overlay with minor repairs to a roadway needed; Bridges: extensive patching of substructure and replacement of deck; Underground: insituform or other in ground repairs; Hydrants: functional, but leaking and replacement parts are unavailable.)

Maderately Paor Condition - requires minor rehabilitation to maintain integrity. (E.g. Roads: minor full depth, partial depth or curb repairs to a roadway with either a thin overlay or no overlay needed; Bridges: major structural patching and/or major deck repair; Hydrants: functional and replacement parts are available.)

Moderately Fair Condition - requires extensive maintenance to maintain integrity. (E.g. Roads: thin or no overlay with extensive crack sealing, minor partial depth and/or slurry or rejuvenation; Bridges: minor structural patching, deck repair, erosion control.)

Fair Condition - requires routine maintenance to maintain integrity. (E.g. Roads: slurry seal, rejuvenation or routine crack sealing to the roadway; Bridges: minor structural patching.)

Good or Better Condition - little to no maintenance required to maintain integrity.

If the infrastructure is in "good" or better condition, it will <u>NOT</u> be considered for SCIP/LTIP funding unless it is an expansion project that will improve serviceability.

Criterion 2 — Safety

Note:

The design of the project is intended to reduce existing accident rate, promote safer conditions, and reduce the danger of risk, liability or injury. (e.g. widening existing roadway lanes to standard widths, adding lanes to a roadway or bridge to increase capacity or alleviate congestion, replacing non-functioning hydrants, increasing capacity to a water system, etc. Documentation is required.)

Mate: Each project is looked at on an individual basis to determine if any aspects of this category apply. The applicant must demonstrate the type of problems that exist, the frequency and severity of the problems and the method of correction.

Criterion 3 – Health

The design of the project will improve the overall condition of the facility so as to reduce or eliminate potential for disease, or correct concerns regarding the environmental health of the area (e.g. Improving or adding storm drainage or sanitary facilities, replacing lead jointed water lines, etc.)

Yote: Each project is looked at on an individual basis to determine if any aspects of this category apply. The applicant must demonstrate the type of problems that exist, the frequency and severity of the problems and the method of correction.

Criterion 4 – Jurisdiction's Priority Listing

The jurisdiction must submit a listing in priority order of the projects for which it is applying. Points will be awarded on the basis of most to east importance. The form is included in the Additional Support Information.

Criterion 5 – Generate Fees

Will the local jurisdiction assess fees or project costs for the usage of the facility or its products once the project is completed (example: rates for water or sewer, frontage assessments, etc.). The applying jurisdiction must submit documentation.

Criterion 6 - Economic Growth

Will the completed project enhance economic growth and/or development in the service area?

Definitions:

Directly secure significant new employment: The project is specifically designed to secure a particular development/employer(s), which will add at least 100 or more new employees. The applicant agency must supply specific details of the development, the employer(s), and number of new permanent employees.

Directly secure new employment: The project is specifically designed to secure development/employers, which will add at least 50 new permanent employees. The applying agency must supply details of the development and the type and number of new permanent employees.

Secure new employment: The project is specifically designed to secure development/employers, which will add 10 or more new permanent employees. The applying agency must submit details.

Permit more development: The project is designed to permit additional business development. The applicant must supply details.

The project will not impact development: The project will have no impact on business development.

Note: Each project is looked at on an individual basis to determine if any aspects of this category apply.

Criterion 7 - Matching Funds - Local

The percentage of matching funds which come directly from the budget of the applying local government.

Criterion 8 – Matching Funds - Other

The percentage of matching funds that come from funding sources other than those mentioned in Criterion 7.

Criterion 9 – Alleviate Traffic Problems

The jurisdiction shall provide a narrative, along with pertinent support documentation, which describe the existing deficiencies and showing how congestion or hazards will be reduced or eliminated and how service will be improved to meet the needs of any expected growth or development. A formal capacity analysis accompanying the application would be beneficial. Projected traffic or demand should be calculated as follows:

Formula:

Existing users x design year factor = projected users

<u>Design Year</u>	Design year factor			
	Urban	Suburban	Rural	
20	1.40	1.70	1.60	
10	1.20	1.35	1.30	

Definitions:

<u>Future demand</u> – Project will eliminate existing congestion or deficiencies and will provide sufficient capacity or service for twenty-year projected demand or fully developed area conditions. Justification must be supplied if the area is already largely developed or undevelopable and thus the projection factors used deviate from the above table.

Partial future demand — Project will eliminate existing congestion or deficiencies and will provide sufficient capacity or service for ten-year projected demand or partially developed area conditions. Justification must be supplied if the area is already largely developed or undevelopable and thus the projection factors used deviate from the above table.

<u>Current demand</u> — Project will eliminate existing congestion or deficiencies and will provide sufficient capacity or service only for existing demand and conditions.

Minimal increase — Project will reduce but not eliminate existing congestion or deficiencies and will provide a minimal but less than sufficient increase in existing capacity or service for existing demand and conditions.

No increase - Project will have no effect on existing congestion or deficiencies and provide no increase in capacity or service for existing demand and conditions.

Criterion 10 - Ability to Proceed

The Support Staff will assign points based on engineering experience and OPWC defined delinquent projects. A project is considered delinquent when it has not received a notice to proceed within the time stated on the original application and no time extension has been granted by the OPWC. A jurisdiction receiving approval for a project and subsequently canceling the same after the bid date on the application may be considered as having a delinquent project.

Criterion 11 - Regional Impact

The regional significance of the infrastructure that is being repaired or replaced.

Definitions:

Major Impact. - Roads: major multi-jurisdictional route, primary feed route to an Interstate, Federal Aid Primary routes.

Moderate Impact. - Roads: principal thoroughfares, Federal Aid Urban routes

Minimal / No Impact - Roads: cul-de-sacs, subdivision streets

Criterion 12 - Economic Health

The District 2 Integrating Committee predetermines the jurisdiction's economic health. The economic health of a jurisdiction may periodically be adjusted when census and other budgetary data are updated.

Criterion 13 - Ban

The jurisdiction shall provide documentation to show that a facility ban or moratorium has been formally placed. The ban or moratorium must have been caused by a structural or operational problem. Points will only be awarded if the end result of the project will cause the ban to be lifted.

Criterion 14 - Users

The applying jurisdiction shall provide documentation. A registered professional engineer or the applying jurisdictions' C.E.O must certify the appropriate documentation. Documentation may include current traffic counts, households served, when converted to a measurement of persons. Public transit users are permitted to be counted for the roads and bridges, but only when certifiable ridership figures are provided.

Criterion 15 – Fees, Levies, Etc.

The applying jurisdiction shall document (in the "Additional Support Information" form) which type of fees, levies or taxes they have dedicated toward the type of infrastructure being applied for.
